

STETH IO

The Steth IO Spot allows telemedicine with live examination for episodic care and remote physiological monitoring for care between episodes - creating a clinical care continuum. Spot is simple to use and records high quality heart and lung sounds for live or offline listening.

The Steth IO Spot allows for patients to submit their symptoms, blood pressure, temperature, heart and lung sounds, leg edema pictures, and pulse oximeter reading to provide a complete and effective remote physiological monitoring (RPM) system.

- Provides a comprehensive live or offline remote visit
- Full compatibility with both Android and iPhone devices
- Customized examination routines for specific patient populations
- Creates actionable reports with raw data and summary statistics
- Simple patient enrollment with devices shipped directly to patients
- API allows for custom integrations with existing EMR systems
- Steth IO Spot is FDA cleared for clinical examination of patients
